

• FOR AGENTS WHO BILL THEIR EXPERTISE

Know what your *time* is really worth.

Every hour you spend on a client is your inventory — most agents never price it. Rapluma has a **built-in work & call timer** that **auto-pauses** when you step away, bills in **0.1-hour minimum blocks**, and rolls straight into each client's P&L — so you can see your **true value per hour** and, after the settlement, **prove your fee with real numbers**.

HOW AN HOUR BECOMES PROOF

TRACK

Time it live

Start a work or call timer per client — one tap.

PAUSE

Idle never bills

Steps away → auto-pause; Hold for reading off-screen.

BILL

0.1-hour blocks

Every entry rounds up to your minimum increment.

COST

Time × your rate

Auto + logged time priced at your hourly rate.

PROVE

Value/hour & ROI

Net profit and value-per-hour, per client.

A timer built for real work

Start work or Start call right on the client's Overview, then Hold or Stop & log. It **auto-pauses** after you step away (no mouse or keyboard) so you never bill idle time — and time only ever accrues while you're actually working.

Billed like a professional

Every timed session or logged call rounds **up to your minimum increment** — **0.1 hours (6 minutes)** by default. Set the block size and the idle threshold once in **Reports**; a 3-minute call bills as one clean block.

Time becomes profit

Logged time joins auto-tracked activity and your hard costs, then nets against **take-home commission** to show **net profit, value-per-hour and ROI** — per client and across your whole book in **Reports**.

Prove your fee

Post-settlement, a **documented time-and-cost trail** sits behind every deal — the hours, the calls, the showings — so you can **show buyers what your expertise is worth**, not just assert it.

Bill your worth:

→ Value/hour per client → 0.1-hour minimum billing → Idle time never billed → Net profit & ROI at a glance

Everything runs on the device. Your time, costs and clients live in an **encrypted on-device store** — no compute backend, no data harvesting. Figures are labeled estimates to help you prioritize, not accounting; the time tools feed the same on-device deal P&L as your costs and commission.
